

Crop Prediction Report

Input Values:

Area: 2785.974367
District: BELLARY
K: 96.0
N: 126.0
P: 59.0
Rainfall: 398.0143434
Season: Kharif
Temperature: 23.82525261
Year: 2027

Result:

Crop: Ragi
Yield: 3.59
Production: 9994.92

Analysis:

- Favorable soil fertility with balanced nutrients.
- Optimal climatic conditions supporting crop growth.
- Effective farming practices leading to high productivity.
- Maintain current nutrient management practices.
- Continue regular soil testing to sustain fertility.
- Adopt precision agriculture tools for better monitoring.
- Use advanced irrigation systems for efficiency.
- Protect crops from pests and diseases proactively.
- Store harvested crops properly to avoid post-harvest losses.
- Consider crop diversification for long-term sustainability.
